- removed avalon-tigris skin SVN (http://svn.apache.org/viewcvs.cgi?rev=39484&view=rev) (andreas)
- - removed unnecessary files - renamed site-backup.xml to site.xml.backup because that causes problems when exporting the site with Forrest SVN (http://svn.apache.org/viewcvs.cgi?rev=39483&view=rev) (andreas)
- Extended the sample file for the simple document doctype SVN (http://svn.apache.org/viewcvs.cgi?rev=39482&view=rev) (felix)
- using Forrest document-v12 DTD: - added DTD - updated catalog - changed doctypes SVN (http://svn.apache.org/viewcvs.cgi?rev=39481&view=rev) (andreas)
- Added doctype handling to the writer methods. The doctype is queried from the document and consequently the transformer (which is needed for writing) is configured with the doctype. SVN (http://svn.apache.org/viewcvs.cgi?rev=39480&view=rev) (egli)
- Now use DocumentHelper for writing. SVN (http://svn.apache.org/viewcvs.cgi?rev=39479&view=rev) (egli)
- validated and corrected documentation XML SVN (http://svn.apache.org/viewcvs.cgi?rev=39478&view=rev) (andreas)
- The parenturi is normaly calculated through the PageEnvelope in the util logicsheet. However I now added the possibility to override this with a request parameter. SVN (http://svn.apache.org/viewcvs.cgi?rev=39477&view=rev) (egli)
- Added some more heuristics to the computation of the document-id: if the requestURI ends in "index" chop it of. SVN (http://svn.apache.org/viewcvs.cgi?rev=39476&view=rev) (egli)
- - node recursion bugfix in sitetree2nav - indent for menuitem3 changed SVN (http://svn.apache.org/viewcvs.cgi?rev=39475&view=rev) (andreas)
- Added the default namespace. SVN (http://svn.apache.org/viewcvs.cgi?rev=39474&view=rev) (egli)
- Added pipelines for creator (using the lenya.usecase scheme from the URI scheme standard). SVN (http://svn.apache.org/viewcvs.cgi?rev=39473&view=rev) (egli)
- Mailing lists updated SVN (http://svn.apache.org/viewcvs.cgi?rev=39472&view=rev) (michi)

- added namespace for root matcher <apply-templates> SVN (http://svn.apache.org/viewcvs.cgi?rev=39469&view=rev) (andreas)
- email as element instead as attribute SVN (http://svn.apache.org/viewcvs.cgi?rev=39468&view=rev) (michi)
- According to the uri scheme standard the request parameters for usecase and step are named "lenya.usecase" and "lenya.step". This is now corrected for all publications and in the root sitemap. SVN (http://svn.apache.org/viewcvs.cgi?rev=39467&view=rev) (egli)
- HTML editor comparison removed SVN (http://svn.apache.org/viewcvs.cgi?rev=39466&view=rev) (michi)
- Skeletal beginnings of a unit test for DefaultSiteTree. SVN (http://svn.apache.org/viewcvs.cgi?rev=39465&view=rev) (egli)
- Added a new default creator action. Unlike the parentChildCreatorAction this action delegates the handling of the sitetree to a separate class (and can therefore work with the new sitetree format). SVN (http://svn.apache.org/viewcvs.cgi?rev=39464&view=rev) (egli)
- Added xsp and xsl for DefaultCreator screen. SVN (http://svn.apache.org/viewcvs.cgi?rev=39463&view=rev) (egli)

- Programming Language added to Schema SVN (http://svn.apache.org/viewcvs.cgi?rev=39461&view=rev) (michi)
- The util.xsl now uses the PageEnvelope class the get most of its information. It could be cleaned up very much now. There are new tags that it'll recognize now. They are based on the naming for the URI scheme: xsp-lenya:context-prefix xsp-lenya:publication-id xsp-lenya:area xsp-lenya:document-id All the other stuffshould be deprecated. SVN (http://svn.apache.org/viewcvs.cgi?rev=39460&view=rev) (egli)
- Added code to return the document-id. The algorithm to calculate the document-id is based on an assumption which doesn't necessarily hold true under all circumstances. That's what the uriparametrizer was meant to solve. This code should probably be used here. It just doen's feel right to invoke another cocoon: request with every invocation of PageEnvelope (and util.xsl). SVN (http://svn.apache.org/viewcvs.cgi?rev=39459&view=rev) (egli)
- started sitemaps documentation SVN (http://svn.apache.org/viewcvs.cgi?rev=39458&view=rev) (gregor)

- Removed more dead code (on advice from Eclipse). SVN (http://svn.apache.org/viewcvs.cgi?rev=38913&view=rev) (egli)
- Changed the interface of ParentChildCreatorInterface: The create method no longer takes a Parameter argument but a more general Map. This way the action can pass in arbitrary Objects to the create method and ultimatively to the transformXML methods. The action now grabs all request, sitemap and session parameter and fills them into a map which is then passed along to the create method which hands it down to the transform method. This way the transform method can fill, e.g. the user (from the session) into a new document. SVN (http://svn.apache.org/viewcvs.cgi?rev=38912&view=rev) (egli)
- test parameters SVN (http://svn.apache.org/viewcvs.cgi?rev=38911&view=rev) (michi)

- The transformation for the computerworld consists of simply adding the title to the article. There was some reference to a non-existing xpath which made the transformation not work. Fixed now. SVN (http://svn.apache.org/viewcvs.cgi?rev=38906&view=rev) (egli)

- The creator hierarchy has been refactored. 1. There is now an interface (ParentChildCreatorInterface) which defines how creators can be invoked. 2. There is one default class (DefaultCreator) which implements the interface and implements the standard behaviour. This class replaces the classes AbstractParentChildCreator and DefaultParentChildCreator SVN (http://svn.apache.org/viewcvs.cgi?rev=38898&view=rev) (egli)

- The creator hierarchy has been refactored. 1. There is now an interface (ParentChildCreatorInterface) which defines how creators can be invoked. 2. There is one default class (DefaultCreator) which implements the interface and implements the standard behaviour. It uses the template pattern, e.g. the create method basically just reads the template file invokes an (empty) transform method on the DOM node and finally writes it back. So subclasses can specify a transform method e.g. replace the title with the childName etc. 3. All classes make use of this and are therefore much smaller. 4. The create method now takes an additional argument 'parameters' which can be used to pass arbitrary arguments. This arg is passed to the transform method where it could be used to read things like the current user, etc. SVN (http://svn.apache.org/viewcvs.cgi?rev=38896&view=rev) (egli)
