

# The Apache Lenya Community

## Table of contents

1	Contribute to the Wiki.....	2
2	Contribute code.....	2
2.1	Preparing a Patch.....	2
2.2	Apply open patches.....	2

Here you will find information on how to interact with and become a member of the Apache Lenya community. Please read as well [Contributing to Apache Forrest](#) from the forrest community because it contains some more information about the process.

## 1. Contribute to the Wiki

The [Lenya Wiki](#) is the scratchpad for the Lenya documentation as well as a kind of whiteboard that is used by the community to sketch proposals about the further direction of the project.

## 2. Contribute code

### Note:

Please use our [Bug tracker](#) to submit patches instead of sending them to the mailing list. All our committer started in creating an account here. ;-)

You can contribute code as patch via our [Bug tracker](#). For this, you file a bug entry in Bugzilla, using the links provided below. The bug entries in Bugzilla should provide a description of what the patch does, and how to apply it. Any further discussion should occur on the Lenya Developer list (see [mailing lists](#))

### 2.1. Preparing a Patch

- For general procedures please see the Cocoon documentation [How to Prepare a Patch](#) and [How to Contribute a Patch via Bugzilla](#). Note that the actual command to create the patch is `svn diff` (instead of `cvs diff -u` as suggested in said documents).
- Make sure you follow the [coding guidelines](#).
- Test your patch by applying it to a fresh checkout of Lenya. In Eclipse for instance, this is done by choosing "apply patch" in the team perspective.
- Follow this link to enter your patch in Bugzilla: [add a new patch](#).

### 2.2. Apply open patches

If you as committer feel that you have some spare time, here is a list of open issues. Just go ahead fix them ;-).

- [list of all provided enhancement bugs](#)
- [list of all provided patches](#)
