

The PageEnvelopeModule

Table of contents

1 Overview.....	2
2 Module Parameters.....	2
3 Sitemap usage.....	2
4 XSP usage.....	2

1. Overview

The PageEnvelopeModule is an InputModule that provides access to the PageEnvelope parameters. For documentation on input modules see section [Modules](http://cocoon.apache.org/2.1/userdocs/concepts/modules.html) (http://cocoon.apache.org/2.1/userdocs/concepts/modules.html) of the Cocoon documentation.

2. Module Parameters

publication-id

The current publication ID.

context-prefix

The context prefix of the web application, e.g. /lenya.

area

The CMS area, authoring or live.

publication

The current publication

document-id

The document ID, i.e. the path of the document in the sitetree.

document-name

The document name, i.e. the very last part of the document ID.

document-url

The URL of the document within the area, e.g., /news/index.html

document-path

The file path where this document is physically located in the file system.

document-language

The language of this document.

document-type

The document type.

3. Sitemap usage

```
<map:parameter name="document-id" value="{page-envelope:document-id}"/>
```

4. XSP usage

```
<xsp:page
  language="java"
  xmlns:xsp="http://apache.org/xsp"
  xmlns:input="http://apache.org/cocoon/xsp/input/1.0">

<usecase:url>
  <input:get-attribute
    module="page-envelope" as="string" name="document-url"/>
</usecase:url>

</xsp:page>
```
