

Apache Lenya Project Charter

The Apache Lenya Project is a community project developing open source content management solutions.

With strong foundations in XML-based server-side web application frameworks, like Apache Cocoon, the Apache Lenya Project consists of a group of people that share common values on collaboration-intensive and community-based quality open source development.

The Apache Lenya Project is proud to share these values with its parent organization: The Apache Software Foundation. The mission of the Apache Lenya Project project is:

- to provide commercial-quality, high-performance, well-tested, standards-based XML editing environments that are developed in an open and collaborative fashion.
- to add user-oriented functionality on top of the Cocoon framework and other Apache projects.
- to advance the state of the art of content management and structured text editing.
