[Diff](#) (<http://svn.apache.org/viewcvs.cgi?rev=422748&view=rev>) Committed by thorsten.

 - [1.0] The util.xml now uses the PageEnvelope class the get most of its information. It could be cleaned up very much now. There are new tags that it'll recognize now. They are based on the naming for the URI scheme: xsp-lenya:context-prefix xsp-lenya:publication-id xsp-lenya:area xsp-lenya:document-id All the other stuff should be deprecated. - [1.0] The creator hierarchy has been refactored. 1. There is now an interface (ParentChildCreatorInterface) which defines how creators can be invoked. 2. There is one default class (DefaultCreator) which implements the interface and implements the standard behaviour. It uses the template pattern, e.g. the create method basically just reads the template file invokes an (empty) transform method on the DOM node and finally writes it back. So subclasses can specify a transform method e.g. replace the title with the childName etc. 3. All classes make use of this and are therefore much smaller. 4. The create method now takes an additional argument 'parameters' which can be used to pass arbitrary arguments. This arg is passed to the transform method where it could be used to read things like the current user, etc. [Diff](http://svn.apache.org/viewcvcs.cgi?rev=38896&view=rev) (http://svn.apache.org/viewcvcs.cgi?rev=38896&view=rev) Committed by egli.
