## 2.2. Documentation

- [Documentation] Refactoring the document changes. The log file was way to big to build and to request on the web. I extended the `projectInfo` plugin in `forrest` with the `svn` functionality that we had her in `lenya`. Doing this I developed as well a handy way to split our big `svn` log apart. When I needed nearly 45 min before to build the documentation this change cuts down the build time to 3 minutes 48 seconds. :) Further this was a oft requested change from our user.
