This list is featuring projects which are closely related to Apache Lenya.

Open Source Content Management Systems overviews can be found at [oscom.org](http://www.oscom.org) (<http://www.oscom.org>) or [cmsinfo.org](http://www.cmsinfo.org) (<http://www.cmsinfo.org>) .

More information on Cocoon-based projects can be found at <http://cocoon.apache.org/link/projects.html>.

1. CocoBlog

CocoBlog is a free [weblog](http://newhome.weblogs.com/historyOfWeblogs) (<http://newhome.weblogs.com/historyOfWeblogs>) software based on Apache Cocoon and Apache XIndice <http://www.beblogging.com/blog/docs>.

2. Cocoon

Apache Cocoon is an XML publishing framework that raises the usage of XML and XSLT technologies for server applications to a new level. Designed for performance and scalability around pipelined SAX processing, Cocoon offers a flexible environment based on a separation of concerns between content, logic, and style. To top this all off, Cocoons centralized configuration system and sophisticated caching help you to create, deploy, and maintain rock-solid XML server applications.

3. Slide

The Slide project main module is a Content Management and Integration System, which can be seen as a low-level content management framework. Conceptually, it provides a hierarchical organization of binary content which can be stored into arbitrary, heterogenous, distributed data stores. In addition, Slide integrates security, locking, versioning, as well as many other services.
