

Apache Lenya

by Michael Wechner

Apache Lenya is a Java-based [Open-Source](#) Content Management System. It is based on open standards such as [XML](#) and [XSLT](#). One of its core components is [Cocoon](#) from the [Apache Software Foundation](#).

Lenya supports inline WYSIWYG editing. Your site editors do not have to learn XML. This is possible thanks to the support of XML, XSLT and XML Schema on the client side. An administration interface allows advanced users to monitor the CMS, and perform configuration tasks.

You are very welcome to participate in the [Lenya project](#). Thank you very much for your suggestions and contributions.
