- [1.4] remove file caching mechanism from default publication. cache reading used to be disabled by default, but we still did cache writing at the expense of three unnecessary transforms per request. it was not feasible to just comment it out, since part of the goal was to make the sitemap easier to grasp, and cache writing involved plenty nested conditionals. there never was proper cache invalidation anyways. so people can now just wget -l -r their site to some static webserver after edits... [Diff](http://svn.apache.org/viewcvcs.cgi?rev=591462&view=rev) (http://svn.apache.org/viewcvcs.cgi?rev=591462&view=rev) Committed by nettings.

- [1.4] fixes for redirects in non-root contexts and proxied environments. added appropriate {proxy:} calls around redirect uris and added proxyModule link rewriting to usecases redirector. please test thoroughly. this is a potentially dangerous commit during code freeze. you can use the jetty6 setup described in tools/proxytest to create a non-root proxy setup without too much hassle. - [1.4] make bxe work in proxied environments. the primary problem was that bxe needs an rng file on the client, and we did not correctly resolve <rng:include href=".."> urls. there are two ugly hacks in the existing code that should eventually be removed altogether. the current patch just adds workarounds, since we're in code freeze. the hacks are: *
webapp/lenya/xslt/resources/translate-rng-includes.xsl implements a fallback uri resolver for client requests and gets it wrong. the error has been fixed and a proxy transformation added, but we should not duplicate knowledge about fallback resolving in an xslt! *
java/org/apache/lenya/cms/cocoon/components/modules/input/ResourceTypeModule.java adds a context prefix to the schema uri and also tries to resolve fallback itself, again not really watertight. the context prefix has been removed, and we now apply a proxy transformer afterwards. to make this work, the proxy transformer configuration was extended to catch rng:include elements. TODO:
bxe.close still redirects to a wrong URL (context prefix instead of proxy) [Diff](#) (<http://svn.apache.org/viewcvs.cgi?rev=594615&view=rev>) Committed by nettings.

- [1.4] removed XUL reference from build.properties (the code no longer exists in trunk) i've updated the version number as well, although it wasn't strictly necessary, but i figured it might be good for everyone to resync their local.build.properties before we put out an RC.
