

Related Projects

by Michael Wechner

This list is featuring projects which are closely related to Apache Lenya.

Open Source Content Management Systems overviews can be found at oscom.org or cmsinfo.org.

More information on Cocoon-based projects can be found at <http://cocoon.apache.org/link/projects.html>.

1. CocoBlog

CocoBlog is a free [weblog](http://www.beblogging.com/blog/docs) software based on Apache Cocoon and Apache XIndex <http://www.beblogging.com/blog/docs>.

2. Cocoon

Apache Cocoon is an XML publishing framework that raises the usage of XML and XSLT technologies for server applications to a new level. Designed for performance and scalability around pipelined SAX processing, Cocoon offers a flexible environment based on a separation of concerns between content, logic, and style. To top this all off, Cocoon's centralized configuration system and sophisticated caching help you to create, deploy, and maintain rock-solid XML server applications.

3. Slide

The Slide project's main module is a Content Management and Integration System, which can be seen as a low-level content management framework. Conceptually, it provides a hierarchical organization of binary content which can be stored into arbitrary, heterogeneous, distributed data stores. In addition, Slide integrates security, locking, versioning, as well as many other services.
