WebDAV quick start

Table of contents

1 Introduction	2
2 Linux	2
2.1 Codesan assumed line	2
2.1 Cadaver - command line	2

1. Introduction

The WebDAV module is right now in rapid development to overcome some limitations. More documentation in progress can be found at the <u>Lenya wiki webDAV page</u> (http://wiki.apache.org/lenya/HowToEditWithWebDAV)

2. Linux

To get started with WebDAV editing under linux you need to install a WebDAV client such as <u>cadaver</u> (http://www.webdav.org/cadaver/).

2.1. Cadaver - command line

Most distributions offer a packaged version of <u>cadaver</u> (http://www.webdav.org/cadaver/).

After having cadaver installed open a shell of your choice and type the following

cadaver http://localhost:8888/default/webdav

You will be asked for your username and password:

Username: lenya Password: levi

Optional (if you do not like "vi") you can change the default editor:

dav:/default/webdav/> set editor emacs

Now you can edit and save your first file via webdav.

dav:/default/webdav/> edit tutorial_en.html
