HTML One Form Editor

0.1 Documentation

by Michael Wechner

1. Integration

In order to make an XML document editable by the One Form Editor, one needs to add a menu item as follows:

Note that the filesystem path is generated by the path mapper which is configured within pub-id/config/publication.xconf.

In order to get the redirect right after closing and saving the document, one might need to add a redirect-to entry to the publication specific sitemap.

2. Configuration

The One Form Editor can be configured within the generic Lenya usecase sitemap lenya/usecase.xmap.

3. Validation

Upon saving, the form content is validated against the appropriate Relax NG schema using the ValidateAction
