Deploy Publication How-To

Table of contents

How to deploy a publication in Apache Lenya:

1. Note:

It is **not** sufficient to copy the publication directories to the *lenya/pubs* directory of your Lenya installation. This way, the core configuration files are not patched, the libraries are not deployed, and other important deployment steps are not applied.

2. Deploying a Publication

1. Download the publication to a directory of your choice. For instance:

    -
      ```
      /src
          /lenya-1.2.x                    <- $LENYA_HOME
          /projects/lenya/pubs            <- $PUBS_HOME
                          /my-pub     <- $MY_PUB_HOME
      ```

2. Declare the publications in *$LENYA_HOME/local.build.properties* using *pubs.root.dirs*

    - For deploying a single publication, add the publication home directory:
      pubs.root.dirs=src/webapp/lenya/pubs:../../projects/lenya/pubs/my-pub

    - For deploying a directory containing publications, add the directory:
      pubs.root.dirs=src/webapp/lenya/pubs:../../projects/lenya/pubs

3. Deploy the publication:

    - Jetty: *$LENYA_HOME> build*

    - Tomcat:

        1. *$LENYA_HOME> build install-pub*

        2. in case if this fails try it in a different way: *$LENYA_HOME> ./build.sh install-pub -Dpub.prefix=""*

4. Restart the servlet engine

5. Go to your Lenya homepage and enjoy the new publication
