- [1.4] removed unused parameter "requestURI" from UsecaseAuthorizer interface fixed UsecaseAuthorizerImpl and external occurrences accordingly cleaned up UsecaseAuthorizerImpl: * made helper functions private, since they are not part of any interface, and an "Impl" should not add to the externally visible API. * removed duplicate javadocs, added @see to interface docs [Diff](http://svn.apache.org/viewcvs.cgi?rev=562850&view=rev) (http://svn.apache.org/viewcvs.cgi?rev=562850&view=rev) Committed by nettings.

- [1.4] move UsecaseAuthorizer, impl and helper classes from usecase to ac module to avoid circular dependencies create new usecase ac.visit change PolicyAuthorizer to check ac.visit permission for each requested page add usecase policy to default: ac.visit will be granted to editors, admins and reviewers (basically restoring the old implicit behaviour, but now in a clean and obvious way without opening security holes) WARNING: this is a proof-of-concept code that touches

2.4. Sandbox

- [Sandbox] experimental new policy authorizer maps url authorization to usecase authorizer via a new pseudo-usecase called ac.visit. addresses bug http://issues.apache.org/bugzilla/show_bug.cgi?id=42952 the current hack-and-slash approach is to delegate a normal uri request http://foo/bar/baz to http://foo/bar/baz?lenya.usecase=ac.visit and thus using all our usecase policy GUI features for page access as well. in the long run, PolicyAuthorizer should probably be removed completely... please review and comment. the branch was necessary, because java dependencies made it necessary to juggle some files between ac and acusecases, which made the changeset too messy for a patch. [Diff](http://svn.apache.org/viewcvs.cgi?rev=562956&view=rev) (http://svn.apache.org/viewcvs.cgi?rev=562956&view=rev) Committed by nettings.
- [Sandbox] an attack on bug http://issues.apache.org/bugzilla/show_bug.cgi?id=42952 * move UsecaseAuthorizer, impl and helper classes from usecase to ac module to avoid circular dependencies * create new usecase ac.visit * change PolicyAuthorizer to check ac.visit permission for each requested page * add usecase policy to default: ac.visit will be granted to editors, admins and reviewers (basically restoring the old implicit behaviour, but now in a clean and obvious way without opening security holes) WARNING: this is a proof-of-concept code that touches security-critical infrastructure. it will compile and has been tested briefly. there has been NO

SECURITY AUDIT of any kind. the whole shebang may be utter bogus - it's here as a discussion item. please review and comment. [Diff](http://svn.apache.org/viewcvs.cgi?rev=562978&view=rev) (http://svn.apache.org/viewcvs.cgi?rev=562978&view=rev) Committed by nettings.
