- [2.0] make bxe work in proxied environments. the primary problem was that bxe needs an rng file on the client, and we did not correctly resolve <rng:include href=".."> urls. there are two ugly hacks in the existing code that should eventually be removed altogether. the current patch just adds

workarounds, since we're in code freeze. the hacks are: * webapp/lenya/xslt/resources/translate-rng-includes.xsl implements a fallback uri resolver for client requests and gets it wrong. the error has been fixed and a proxy transformation added, but we should not duplicate knowledge about fallback resolving in an xslt! * java/org/apache/lenya/cms/cocoon/components/modules/input/ResourceTypeModule.java adds a context prefix to the schema uri and also tries to resolve fallback itself, again not really watertight. the context prefix has been removed, and we now apply a proxy transformer afterwards. to make this work, the proxy transformer configuration was extended to catch rng:include elements. TODO: bxe.close still redirects to a wrong URL (context prefix instead of proxy) [Diff](http://svn.apache.org/viewcvs.cgi?rev=594615&view=rev) (http://svn.apache.org/viewcvs.cgi?rev=594615&view=rev) Committed by nettings.
