Lenya Protocols

Cocoon uses different protocols to access sources. The protocols are handled by a `SourceFactory` which resolves the given URI to a source. There are a few protocols specific to Lenya:

- `lenya-document:` (../../../../docs/2_0_x/reference/protocols/lenya-document.html) Reference a document by UUID. The swiss army knife of Lenya. Used for all internal links.

- `site:` (../../../../docs/2_0_x/reference/protocols/site.html) Get a `RepositorySource` using the path of a document in the site structure.

- `lenya:` (../../../../docs/2_0_x/reference/protocols/lenya.html) Get a `RepositorySource` in the context of Lenya. Used mainly internally.

- *deprecated* `lenyadoc:` (../../../../docs/2_0_x/reference/protocols/lenyadoc.html) Get a `RepositorySource` of a specific document using the UUID.
