Lenya Protocols

Cocoon uses different protocols to access sources. The protocols are handled by a `SourceFactory` which resolves the given URI to a source. There are two protocols specific to Lenya:

- [lenya:](../../../../docs/1_4/reference/protocols/lenya.html) (../../../../docs/1_4/reference/protocols/lenya.html) Get a `RepositorySource` in the context of Lenya.
- [lenyadoc:](../../../../docs/1_4/reference/protocols/lenyadoc.html) (../../../../docs/1_4/reference/protocols/lenyadoc.html) Get a `RepositorySource` of a specific document.
