lenya: Protocol

The `lenya:` protocol creates a [RepositorySource](http://lenya.apache.org/apidocs/1.4/org/apache/lenya/cms/cocoon/source/RepositorySource.html)
(http://lenya.apache.org/apidocs/1.4/org/apache/lenya/cms/cocoon/source/RepositorySource.html) ,
which is a [TransactionableSource](http://lenya.apache.org/apidocs/1.4/org/apache/lenya/cms/cocoon/source/TransactionableSource.html)
(http://lenya.apache.org/apidocs/1.4/org/apache/lenya/cms/cocoon/source/TransactionableSource.html) .
The resolution of the URI is based on the `context:` protocol handler, i.e. you are accessing files under
the webapp base directory.
