The Apache Lenya Community

Table of contents

Here you will find information on how to interact with and become a member of the Apache Lenya community.

1. Contribute code

You can contribute code as e.g. an "Enhancement Patch". For this, you file a bug entry in Bugzilla, using the links provided below. The bug entries in Bugzilla should provide a description of what the patch does, and how to apply it. Any further discussion should occur on the Lenya Developer list (see mailing lists (../community/mailing-lists.html))

1.1. Preparing a Patch

- For general procedures please see the Cocoon documentation How to Prepare a Patch (http://cocoon.apache.org/2.1/howto/howto-patch.html) and How to Contribute a Patch via Bugzilla (http://cocoon.apache.org/2.1/howto/bugzilla.html) . Note that the actual command to create the patch is svn diff (instead of cvs diff -u as suggested in said documents).
- Make sure you follow the coding guidelines (../1_2_x/misc/coding-guidelines.html) .
- Test your patch by applying it to a fresh checkout of Lenya. In Eclipse for instance, this is done by choosing "apply patch" in the team perspective.
- Follow this link to enter your patch in Bugzilla: add a new patch (http://issues.apache.org/bugzilla/enter_bug.cgi?reporter=&product=Lenya&version=Current+CVS&component=core&rep .

1.2. Apply open patches

If you as committer feel that you have some spare time, here is a list of open issues. Just go ahead fix them ;-).

- list of all provided enhancement bugs
  (http://issues.apache.org/bugzilla/buglist.cgi?bug_status=NEW&bug_status=ASSIGNED&bug_status=REOPENED&bug_s
- list of all provided patches
  (http://issues.apache.org/bugzilla/buglist.cgi?bug_status=NEW&bug_status=ASSIGNED&bug_status=REOPENED&bug_s
